

Activate and configure the DooFinder search

1 To get to the plugin settings, it is necessary to open the submenu of extensions and switch to "My Extensions".

2

The "DooFinder - Integration for Shopware 6" plugin must then be found on the "My Extensions" page.

A context menu can be opened via the 3 dots.

DooFinder Live Layer

Detailed description: This screenshot shows the 'DooFinder Integration' settings panel. At the top, there is a dropdown menu labeled 'Alle Verkaufskanäle'. Below it is the section header 'DooFinder Integration'. The first setting is a toggle switch labeled 'DooFinder Suche aktivieren', which is currently turned off. An orange circle highlights this toggle. Below the toggle is a text input field for the 'API Key', which contains a redacted orange bar. Underneath is another dropdown menu for 'DooFinder Layer Integrations-Typ', which is set to 'DooFinder Live Layer'.

- 5 The key known from the DooFinder admin must be stored in the "API Key" field (see also www.intedia.de/docs/en/shopware6/doofinder/get-...)

DooFinder Recommendations aktivieren

DooFinder native Suche aktivieren

Detailed description: This screenshot shows the 'DooFinder Integration' settings panel with more options visible. The 'DooFinder Suche aktivieren' toggle is now turned on, indicated by a blue circle. The 'API Key' field still contains the redacted orange bar, but an orange circle highlights it. Below the 'DooFinder Layer Integrations-Typ' dropdown (set to 'DooFinder Live Layer'), there is a new toggle for 'DooFinder Recommendations aktivieren', which is also turned on. At the bottom, there is a label 'DooFinder native Suche aktivieren' without a toggle.

6

With a click on the dropdown menu "DooFinder Layer Integration Type" you can choose how DooFinder should be integrated.

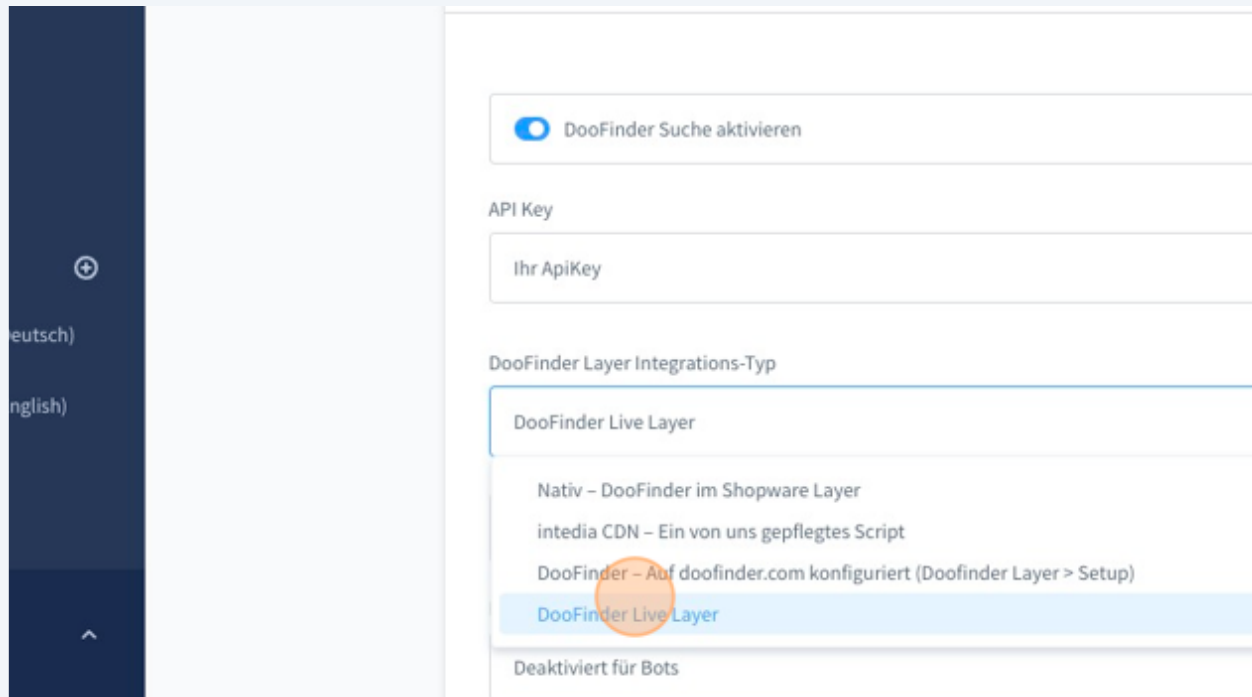

The screenshot displays a configuration interface for DooFinder. On the left, a dark blue sidebar contains a plus icon at the top, followed by language options: "Deutsch)" and "English)". At the bottom of the sidebar is an upward-pointing arrow. The main content area is white and contains several settings:

- A toggle switch labeled "DooFinder Suche aktivieren" which is currently turned on.
- A section titled "API Key" with a text input field containing "Ihr ApiKey".
- A section titled "DooFinder Layer Integrations-Typ" with a dropdown menu showing "DooFinder Live Layer". This dropdown is highlighted with an orange circle.
- A toggle switch labeled "DooFinder Recommendations aktivieren" which is currently turned on.
- A section titled "Doofinder native Suche aktivieren" with a text input field containing "Deaktiviert für Bots".

7

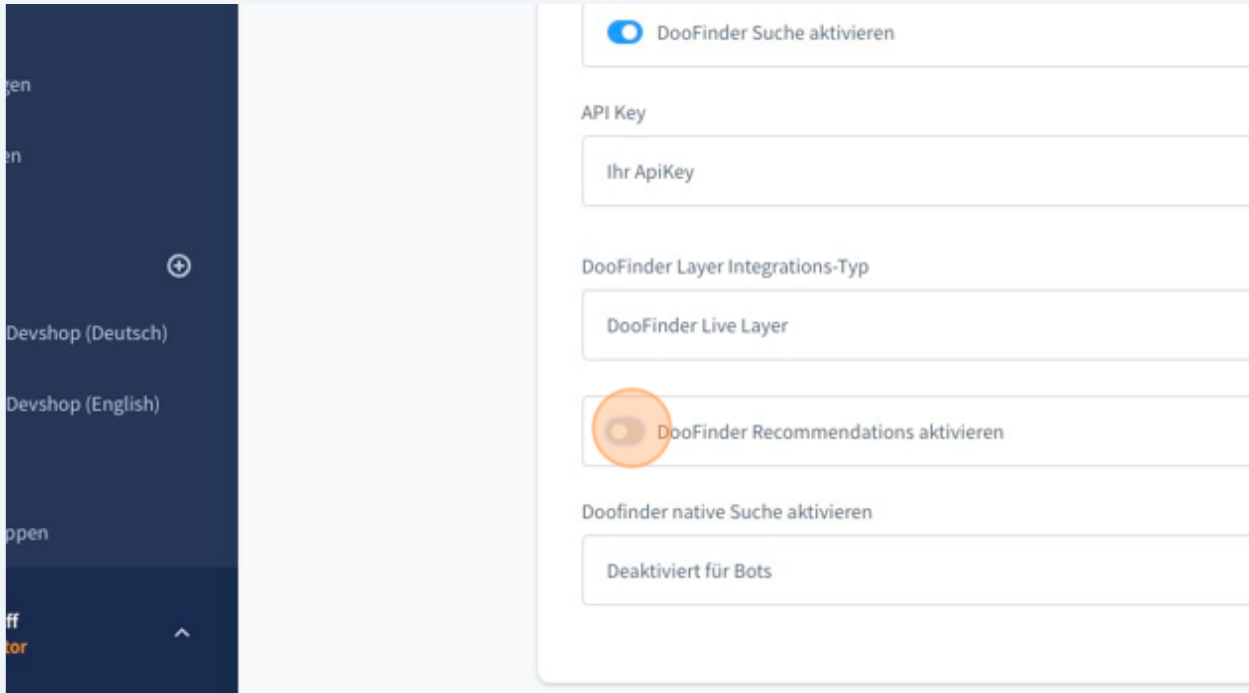

The following integration types are available:

- Native means the search results are still displayed as if they came from Shopware. The appearance of the search results does not change, but the results are obtained from DooFinder.
- Intedia CDN means we provide the DooFinder Script.
- DooFinder is only available to existing customers and will no longer be supported in the future.
- DooFinder Live Layer is the newest variant of DooFinder layer. The appearance of the search results can be customized via the DooFinder administration.

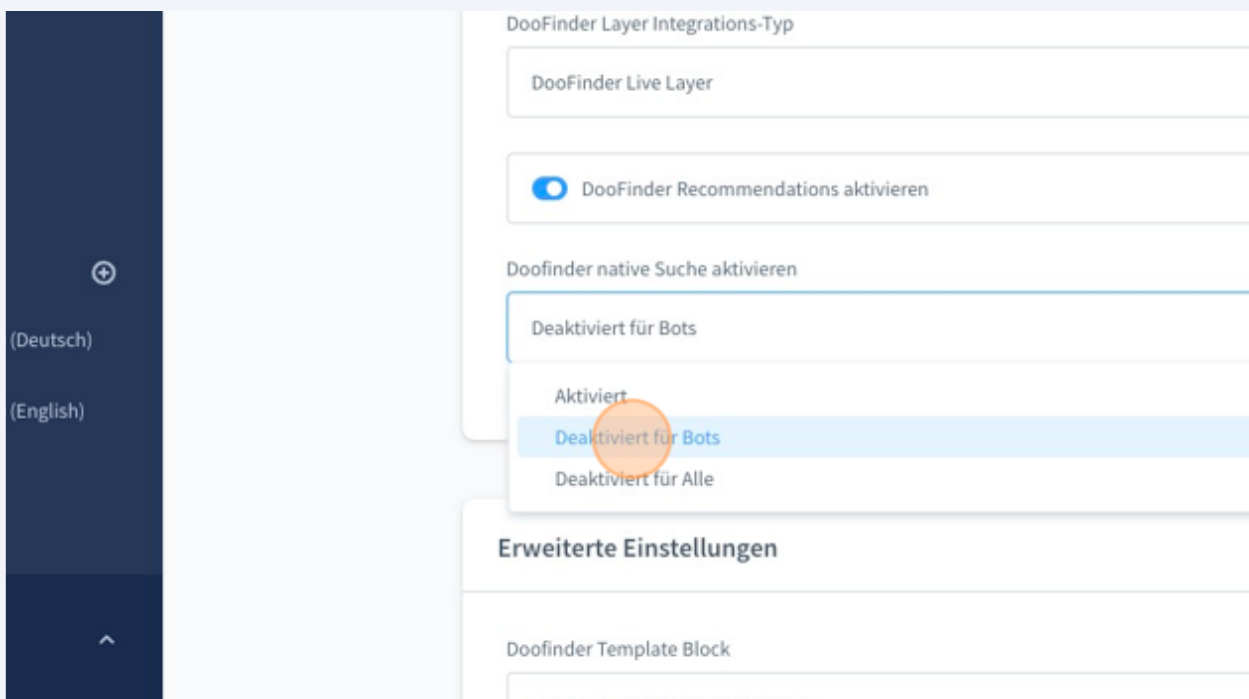

8

If you want to use the DooFinder recommendations, they can be activated here. Please note that the recommendations must also be activated in your DooFinder account.

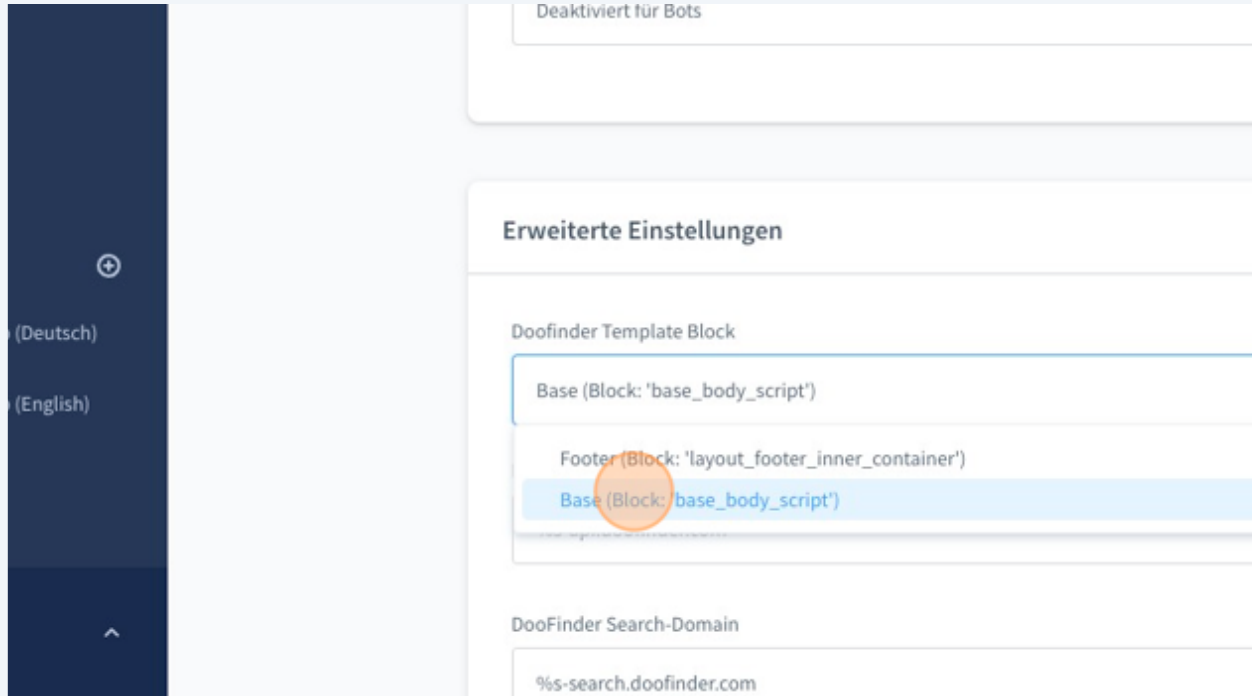

9

The native search, i.e. the direct connection of the Shopware instance via DooFinder API, can be configured again specifically. It can be defined whether the native search should always be active or, for example, only for queries that have not been identified as bots from Google and Co. In this way, requests can be saved.

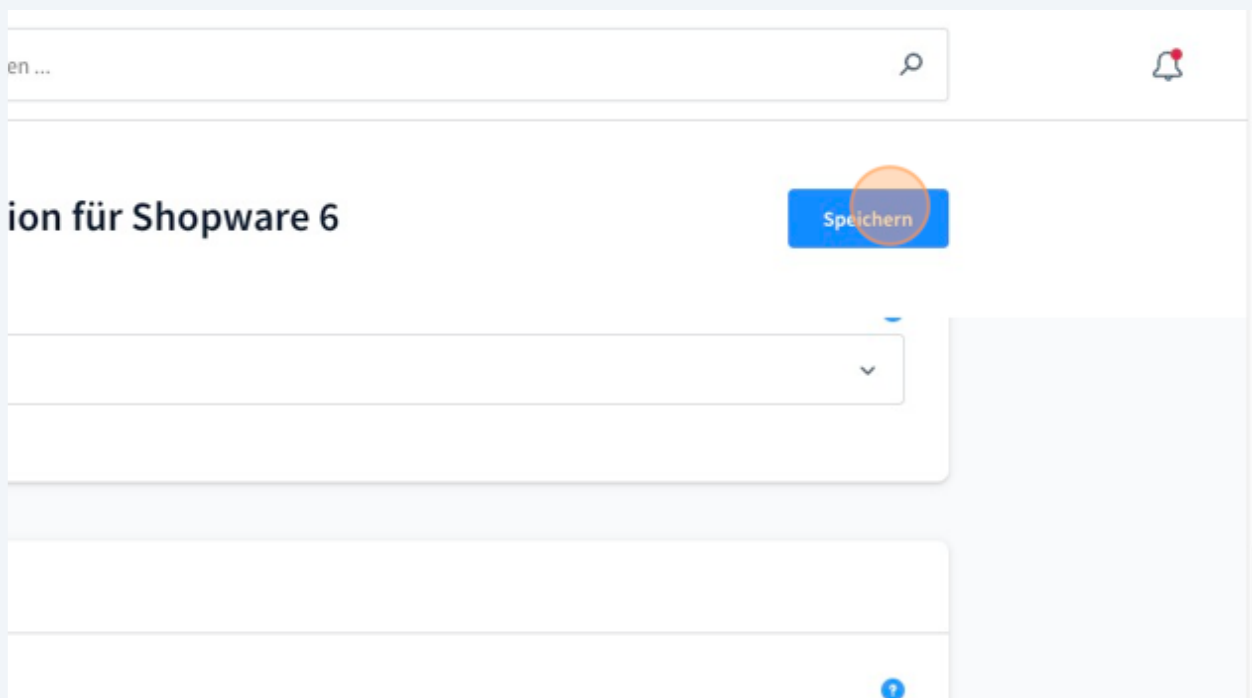

10

This setting is used to record where DooFinder's JavaScript code should be integrated. In 99% of all cases the standard `base_body_script` can be used here.

11

When all settings are complete, simply save.

12

If everything worked, a success message is displayed. If there are errors, check the API key once. If errors continue to occur despite the correct API key, you are welcome to contact us at support@intedia.de.

The screenshot shows a web interface with a search bar at the top containing the text "en ...". Below the search bar, the text "ion für Shopware 6" is visible. A blue button labeled "Speichern" is positioned above a success message box. The success message box contains a green checkmark icon, the word "Erfolg", an orange circle, and the text "Konfiguration gespeichert." with a green 'x' icon to close the message. Below the success message, there is a dropdown menu with a downward arrow and several empty input fields.
