

Linking of search engines with the Shopware administration

1

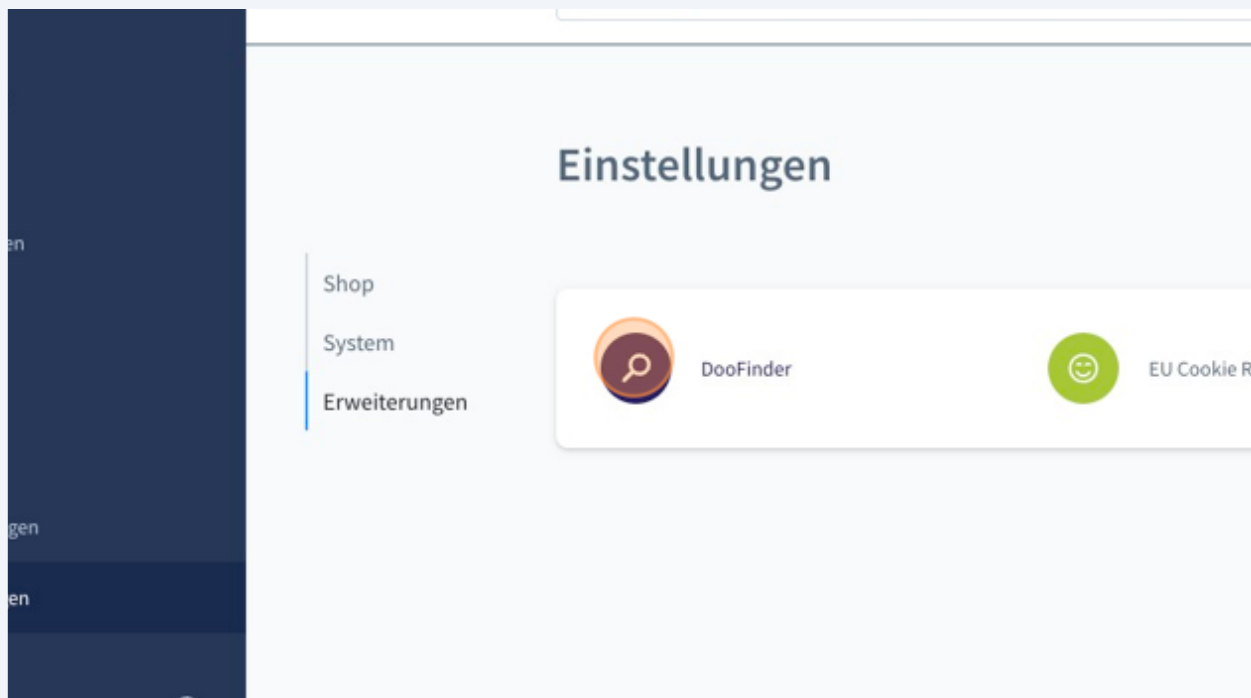

The configuration of the DooFinder SearchEngines can be found in the Shopware settings.

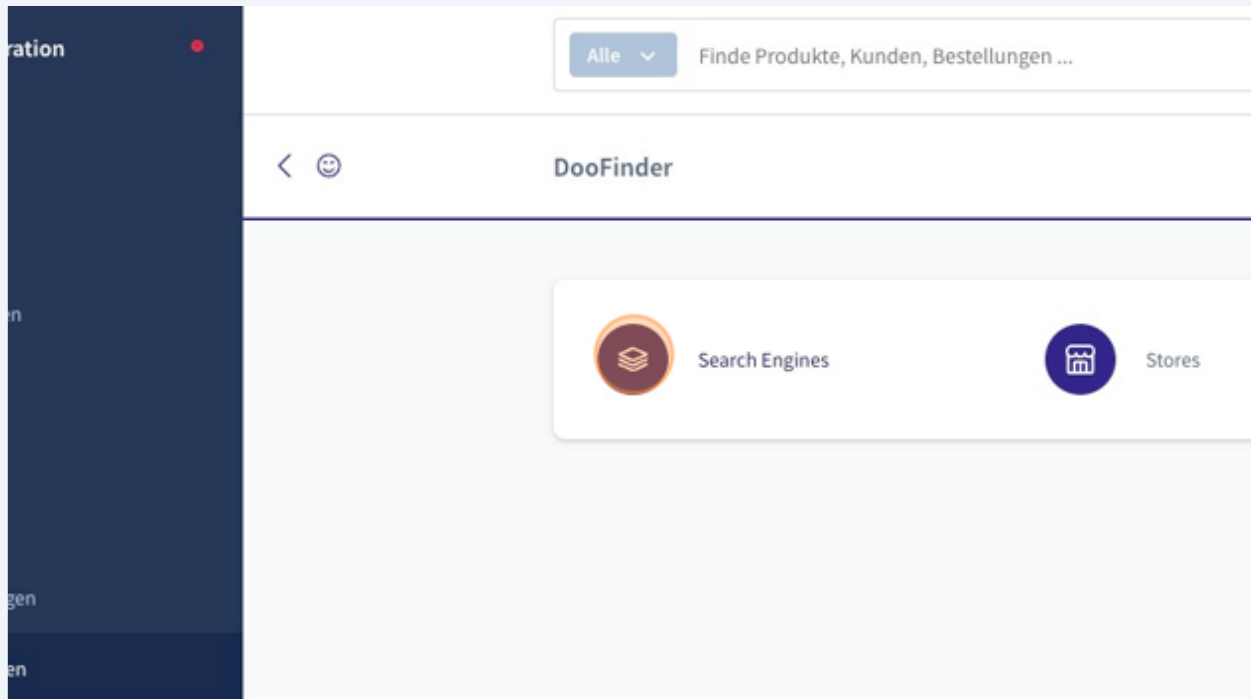

2 In this area, open the "Extensions" tab.

3 In the extensions, next go to the menu of DooFinder.

4 Here we go into the Search Engines option.

5

The search engines to be connected to the shop can now be managed here.

All storefront sales channels and their domains are listed and can be linked to DooFinder search engines.

By managing on the basis of the domains, different engines for different languages can be integrated within the same storefront sales channel. In this way, DooFinder can be easily connected to a multilingual Shopware instance.

Important: Please make sure that you are using the correct version of the domain. That is, do you use www. in front of your shop domain, you should choose www.your-domain.tld for linking to DooFinder.

	Search Engine	Engine HashId	Index Status	
				...
			No SearchEngine found on	...
				...

6

As soon as the correct sales channel has been selected, the "Link search engine" option is now used via the menu behind the three dots.

Search Engine	Engine HashId	Index Status	
			...
		No SearchEngine found on	...
			...

Search Engine erstellen

Search Engine Verknüpfen

7

In the window that opens, you can select the respective DooFinder store in which the search engine to be linked is located. A DooFinder store is the equivalent of a storefront sales channel in Shopware and can contain different search engines for different languages.

Domain	Verbunden	DooFinder Store	Search Engine	Engine

https://ntedia.de				(Deutsch)
https://ntedia.de/en				

Search Engine verlinken [X]

DooFinder Store

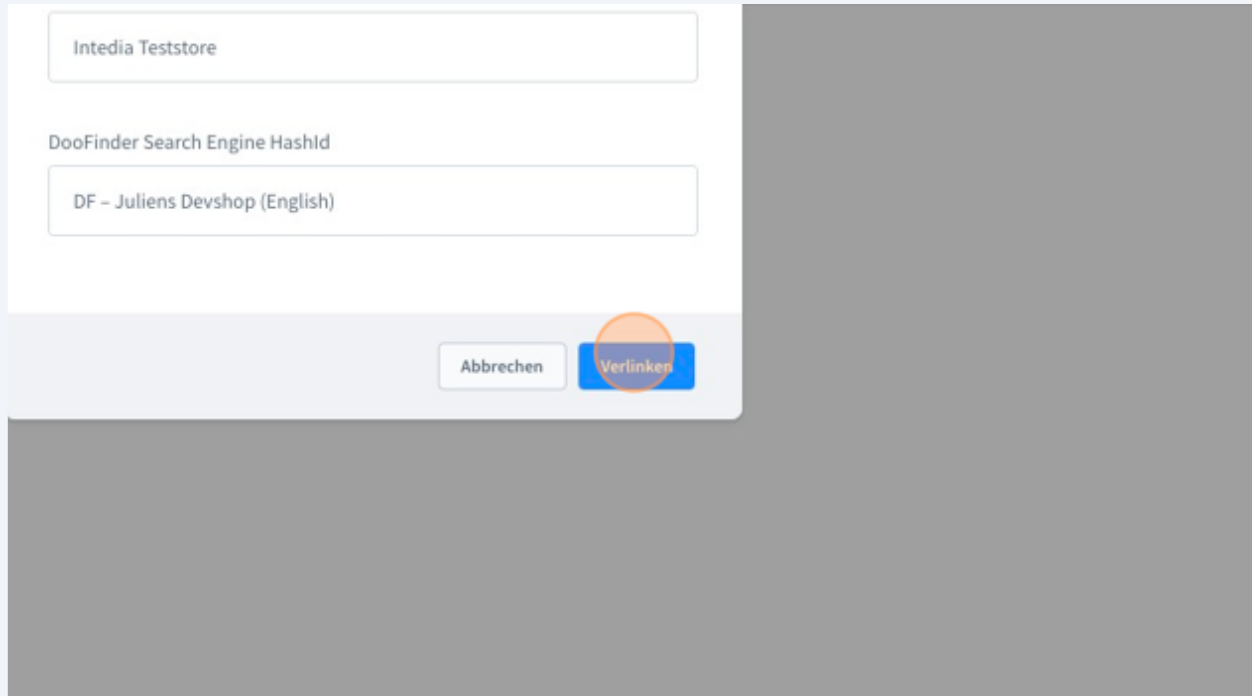

Bitte wählen

DooFinder Search Engine HashId

Abbrechen Verlinken

8

If both values are selected, all you have to do is click on Link.

The image shows a screenshot of a web form. On the left side, there are two input fields. The first field contains the text "Intedia Teststore". Below it, the label "DooFinder Search Engine HashId" is visible, followed by a second input field containing the text "DF - Juliens Devshop (English)". At the bottom of the form, there are two buttons: a white button labeled "Abbrechen" and a blue button labeled "Verlinken". The "Verlinken" button has a red circle with a white dot overlaid on it, indicating it is the focus of the instruction. The right side of the image is a solid grey rectangle, representing a blurred or redacted area.

9

You should now see a success message confirming that the search engine was linked successfully.

If there are problems, we are available at support@intedia.de and will be happy to help.
